Exercise T-2.1

Problem

Consider a sample space X comprising three possible outcomes $X = v_1, v_2, v_3$.

We define the events

$$E = \{v_1, v_2\}$$
$$F = \{v_1, v_3\}$$

and denote by E^c the complement of E.

Compute $P(F|E^c)$, the conditional probability of F given E^c , using the conditional probability formula for the events A and B:

$$P(A|B) = \frac{P(A \cap B)}{P(B)}$$

Solution

An answer.

Exercise T-2.2

Problem

The Census Bureau has estimated the following survival probabilities for men:

1. probability that a man lives at least 70 years: 80 %

2. probability that a man lives at least 80 years: 50 %

What is the conditional probability that a man lives at least 80 years given that he has just celebrated his 70th birthday?

Solution

An answer.
